

HISTORY

Topstar is a well-established industrial company with a solid presence of over thirty years. Topstar excels in the manufacturing of worktops and components in laminate and compact materials for the furniture industry. Anchored in the dynamic industrial district of the Marche region, our company draws strength from the successful combination of a strong history and a progressive vision. This unique alliance between tradition and innovation guides Topstar through every challenge, whether in terms of production or trade. We are firmly committed to achieving exceptional levels of performance, embodying our dedication to excellence while staying at the forefront of industry developments.

OUR FLEXIBILITY IS LIMITLESS:

We have the capacity to meet your needs, whether for small, medium, or large productions, offering total flexibility to adapt to your specific requirements.

CUSTOM VARIETIES:

We provide the opportunity to supply specific decors, both in Italy and abroad, to meet your unique demands and create customized solutions that transcend borders.

INNOVATION AND SUSTAINABILITY:

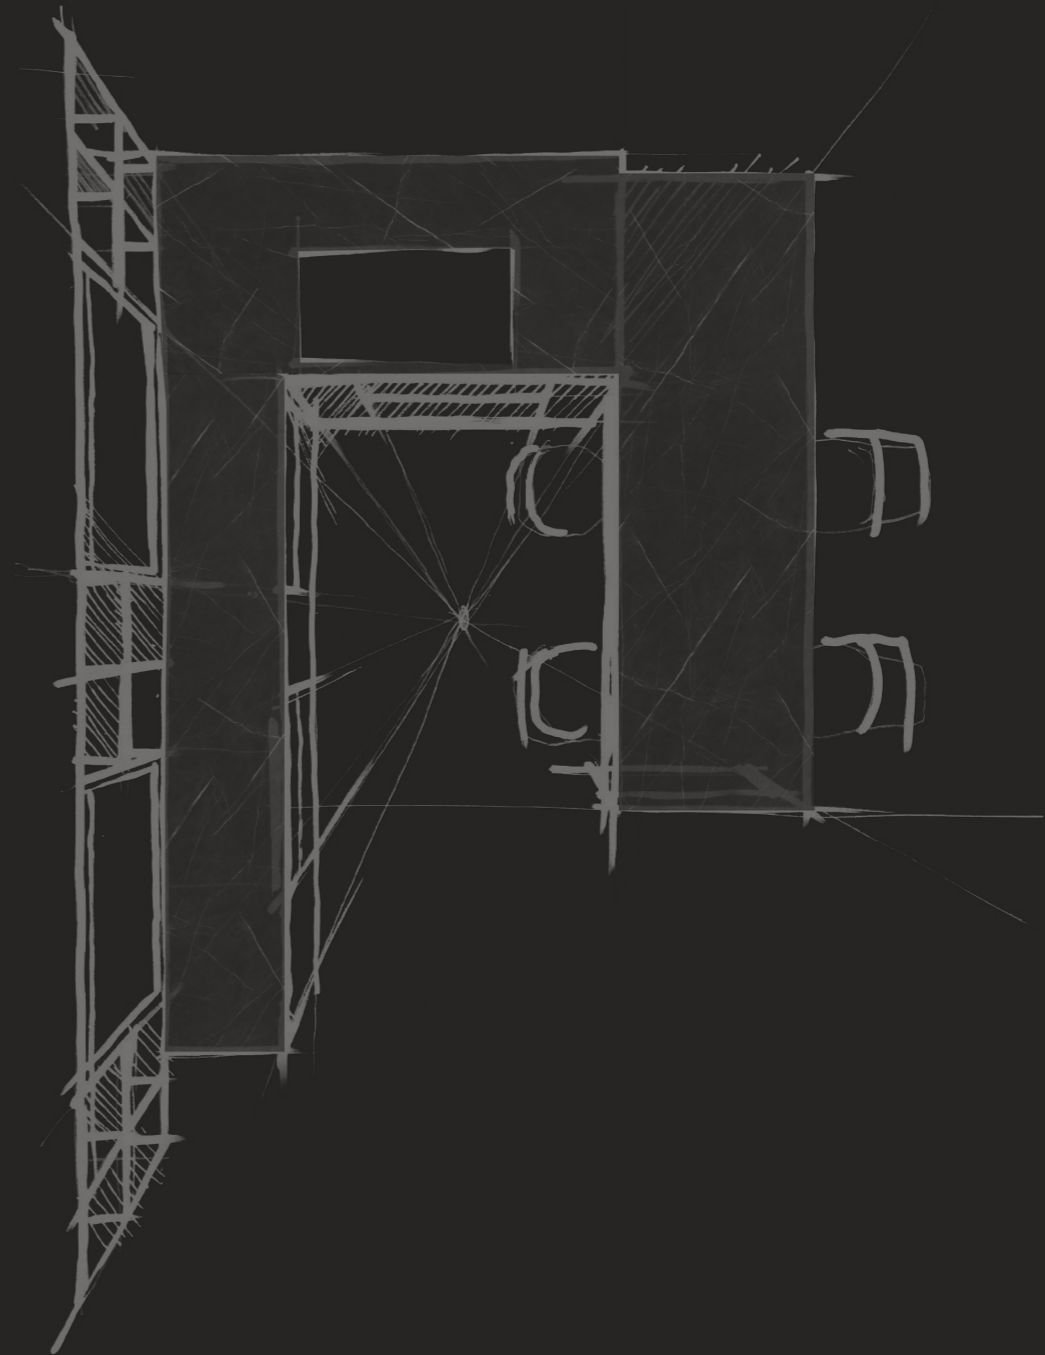

Our extensive availability of modern raw materials, coupled with constant technological research, illustrates our commitment to environmental sustainability. Our low formaldehyde emission particle boards and polyurethane adhesive edges demonstrate our ongoing concern to combine innovation with environmental responsibility.

QUALITY IN CONSTANT EVOLUTION:

Topstar is dedicated to continuous improvement of its operational system to guarantee a level of performance that meets the high expectations of the most demanding European customers. Our constant commitment to excellence ensures maximum customer satisfaction.

A

B

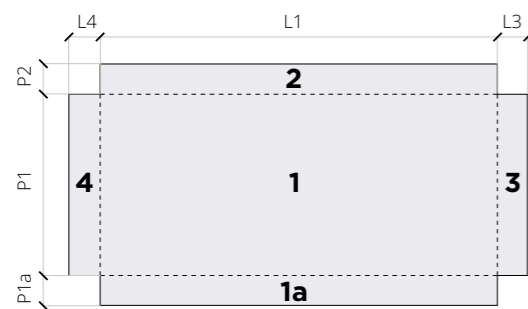

C

Minimum and maximum size of the veil:
From 20 mm to 120 mm

DEPTH/LENGTH CALCULATION FORMULA

DEPTH: (P1 + P1a) + P2 optional → ES.: 640(P1) + 80(P1a) + 80(P2) = 800 mm
 LONGITUDE: L1 + L3 optional + L4 optional → ES.: 2000(L1) + 80(L3) + 80(L4) = 2160 mm

▲ WARNING:

The total dimensions of P1a + P1 + P2 must never exceed 1280 mm
 The total dimensions of L4 + L1 + L3 must never exceed 4150 mm.

TECHNICAL INFORMATION

COMPACT PANELS

The Compact, available with a thickness of 12 mm, is composed of sheets of paper impregnated with resins and pressed at high pressure. The visible core between its two decorative faces is available in black, white, or matched to the chosen decoration. It can also be coated with a matching ABS edge. Suitable for any work surface and backsplash, the compact ensures optimal maintenance ease thanks to its surface identical to that of an HPL laminate. Its high density gives it exceptional resistance to moisture and impacts. The impalpability resistance feature even allows for the integration of sinks. To absorb potential expansions, it is recommended to leave a space of 3 to 5 mm between the work surface and the wall. Detailed information to simplify installation can be obtained by contacting our sales service upon request.

USE AND TECHNICAL FEATURES

WORKTOP AND SIDES

- Minimum workable size: 240 x 560 mm
- Maximum workable size: 1280 x 4150 mm

WALL PANELS

- Minimum size for 3-sided chamfering: L 560 mm x H 50 mm
- Minimum size for 4-sided chamfering: L 560 mm x H 240 mm
- Minimum size for ABS edge plating: H 80 mm

Chamfering is performed at no extra cost; please indicate it in your drawing.

LAMINATE PANELS

High Pressure Laminate (HPL) panels result from a production process that involves assembling three main elements: the laminate sheet, obtained through the pressing of kraft paper and decorative paper impregnated with resin and coated with a transparent film to protect printed designs. The moisture-resistant chipboard panel offers increased resistance to humidity and optimal durability, with an average density of 535 kg/m³. Lastly, the balancing laminate sheet, white for single-faced panels or matched to the surface for double-faced decorative panels. This configuration makes it an optimal choice for work surfaces, offering significant resistance to normal household activities such as water splashes and food contact. The range of available colors is curated considering the latest trends, with a priority for hues inspired by pure and natural materials like marble, stone, and wood.

USE AND TECHNICAL FEATURES

WORKTOP AND SIDES

- Support: Moisture-resistant chipboard panel thickness 19 - 39 - 59 mm
- Frontal Laminate: Decorative Laminate
- Back Laminate: White Balancing Laminate or Decorative Laminate for double-sided
- Edge: ABS
- Maximum Dimensions: 1280 mm - 4150 mm

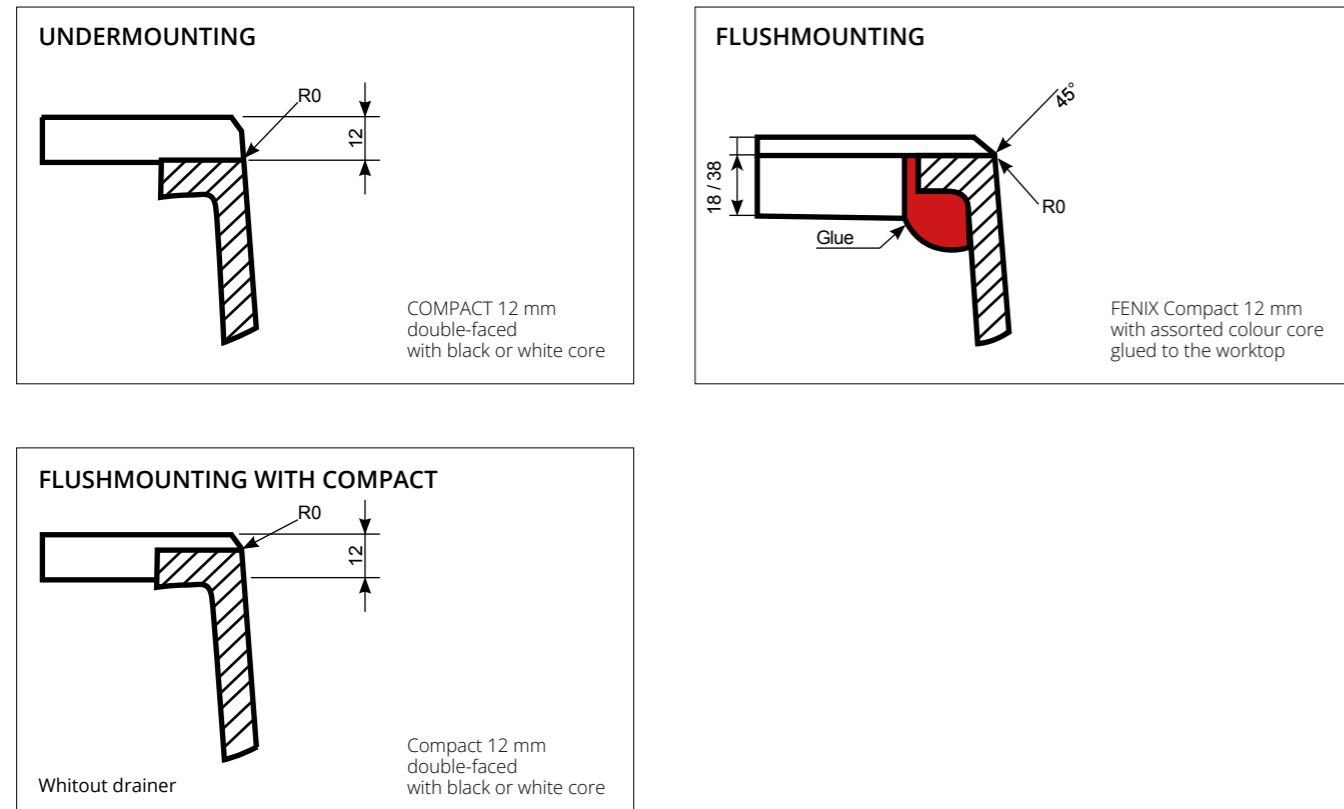

WALL PANELS

- Support: Standard chipboard panel thickness 13 mm
- Frontal Laminate: Decorative Laminate
- Back Laminate: White Balancing Laminate or Decorative Laminate for double-sided
- Edge: ABS on all 4 sides by default
- Maximum Dimensions: 1280 mm - 4150 mm - Metals maximum length 3050 mm

INTEGRATED OR UNDER-TOP TUBS IN FENIX

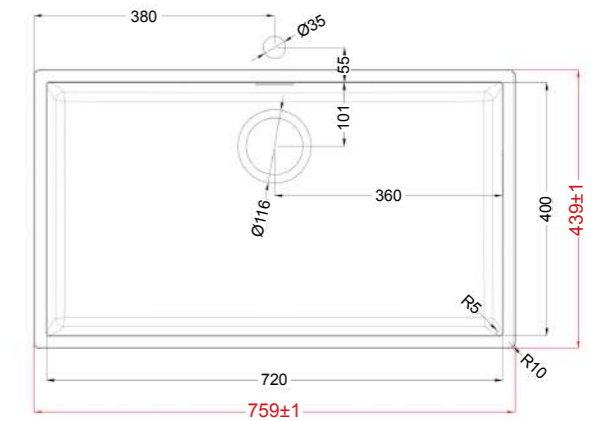

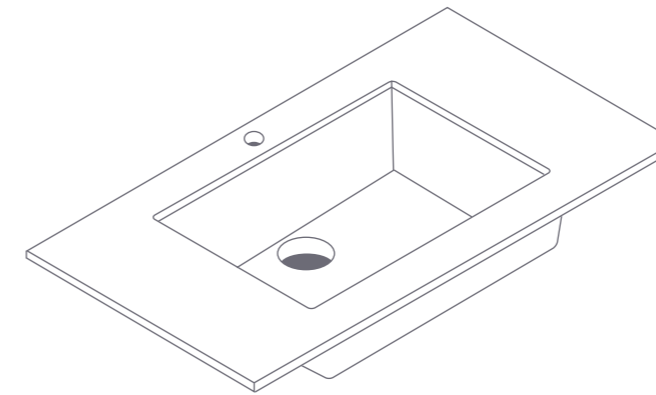

The **FENIX KITCHEN SINKS** are inserted from below and fixed to the worktop in two different ways: Undermount (for HPL (and FENIX compact worktops) or flushmount (for HPL, FENIX and FENIX 1,2mm laminate worktops)

MOUNTING KEY POINTS:

The FENIX INTEGRATED SOLUTIONS KITCHEN SINKS collection is an elegant and harmonious choice combining performance and aesthetics. Designed for sink production, this mix is made of ceramic nano-particles and six innovative acrylic resins. Its special composition makes the sink highly resistant to impacts and thermal stress. Its smooth surface allows quick water drip and creates a "lotus effect" that facilitates cleaning. The anti-UV treatment protects the sink from fading over time.

LARGE Flush tank

 Min W. top dim. 600 mm

INTEGRATED OR UNDERMOUNTED ELLECI TANKS

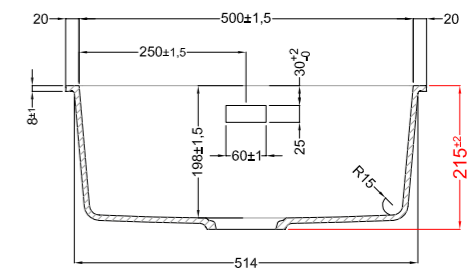

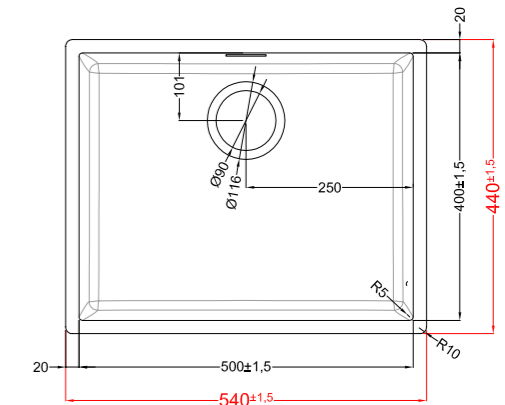

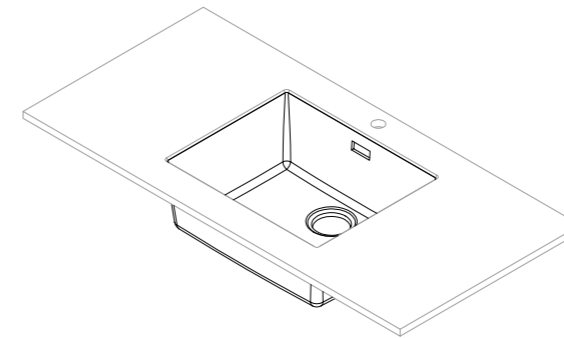

The ELLECI KITCHEN SINKS are inserted from below and fixed to the worktop in two different ways: Undermount or flushmount.

MOUNTING KEY POINTS:

KERATEK PLUS is an innovative material, composed of natural stone, acrylic resin and ceramic nanoparticles. It is made using a new technology that compacts the surface to the maximum, making it resistant and giving it a high colour rendering. The Keratek Plus sink will therefore be smooth to the touch, making cleaning much easier. Thanks to this new technology, the quartz that is used can form stronger bonds with the six acrylic resins used in production, making the sink much more compact and smooth than the Granitek sink. A Keratek Plus sink will therefore have greater water repellency and durability and be even easier to clean.

INTEGRATED STAINLESS STEEL TANKS

The only stainless steel sink that can be perfectly integrated in our worktops with HPL and FENIX laminates and FENIX Compact 1,2 mm. With its 30 years of experience in the design of kitchen sinks, EdgeSinks™ launches a new system that revolutionises the relationship between sink and worktop. The new EdgeSinks™ collection is the result of a technological research that has led to the development of a product that is innovative both aesthetically and functionally. Thanks to a special manufacture and integration method, we achieve a perfect continuity between worktop and sink, resulting in a tactile and elegant visual impact. The sinks are very thick and have an inner radius of approx. 15mm for precise cleaning. They are also available in most dimensions.

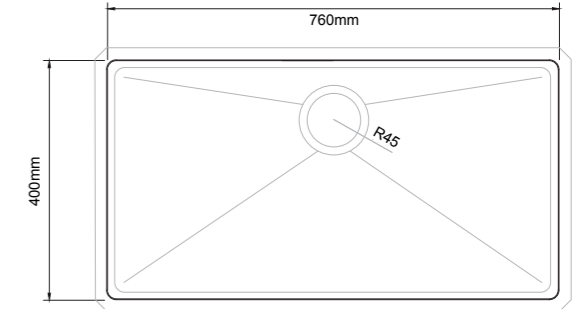

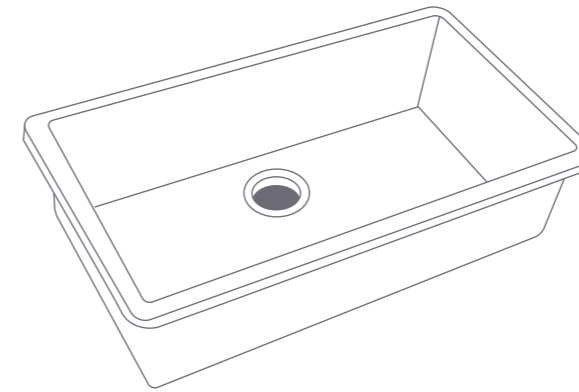

- Perfect integration with our laminates
- Highly hygienic
- No silicone
- Highly aesthetic
- Easy maintenance
- Corners with 15 mm radius
- Stainless steel 304, 1.2 mm thick

- Overflow
- Steel surface with brushed satin finish
- Functional flow lines
- Moulded resin edges machined 25 mm
- 90 mm wide drain

Weight 7,9 kg

INTEGRATED TANKS IN COMPACT TOPSTARS

The compact laminate sink offers optimal integration with worktops, providing a robust and functional solution for demanding kitchen spaces. Made of high-density compact laminate, this sink effectively withstands mechanical stress and offers a surface that is impermeable to liquids and easy to clean. The compact laminate, characterised by its multilayer, high-pressure layered composition, gives the sink greater resistance to impacts and scratches. Its homogeneous surface guarantees maximum hygiene, meeting the rigorous demands of professional culinary environments. This technical solution combines durability and performance, offering an integrated solution for kitchen applications requiring structural strength and ease of maintenance.

RECCOMENDEATIONS FOR INSTALLING THE COMPACT

GLUING WORKTOPS ONTO BASES

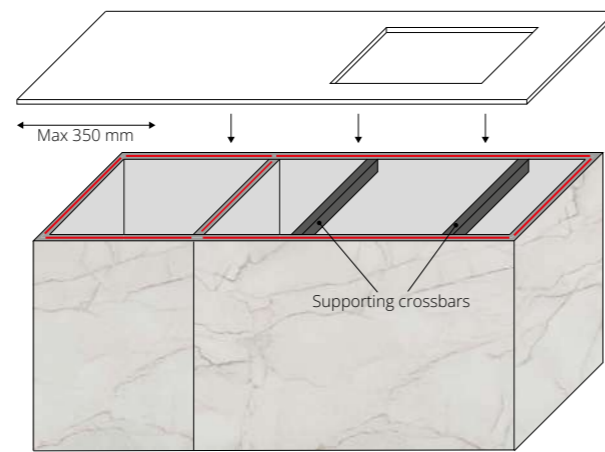

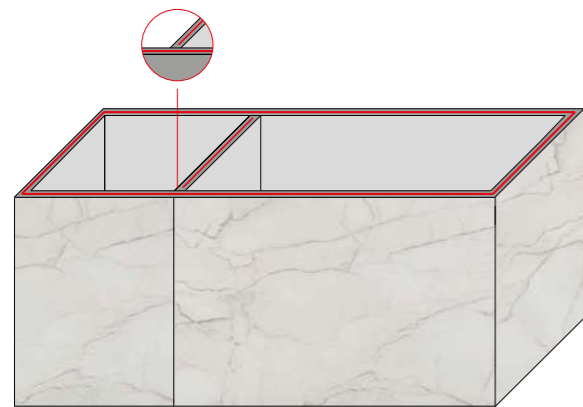

During the gluing of the compact onto bases, it is recommended to use PU (Polyurethane) glue, applied in beads. Ensure that the surfaces are completely free of dust and degreased before application. On a base with a ceiling, space the beads 30 cm apart discontinuously to allow air circulation and keep them 10 mm away from the edge. For bases without a ceiling, position the beads discontinuously and keep them 10 mm away from the edge. To avoid the flexion of the countertop, it is essential to provide at least four support surfaces on the base (front, back, left, and right) and install support bars on the sides of the openings. A maximum snack countertop of 350 mm (overhang into the void) is acceptable.

Furniture with ceiling

— Adhesive strips

Furniture without ceiling

WALL PANEL GLUING

Gluing the back panels requires the application of beads of polyurethane adhesive sealant, with intervals of 30 cm between them. These discontinuous beads, to promote air circulation, should be 10 mm away from the edge, following the same principle as gluing onto a base with a ceiling. It is essential to avoid depositing glue dots. To prevent any sealing issues, the joint between the back panel and the countertop must be isolated with a silicone seal. Note that use behind a gas cooker is not recommended.

VENTILATION

Ensuring uniform ventilation on both sides of the panel is crucial to maintain balance in terms of temperature and humidity. It is therefore essential to strictly adhere to the gluing rules described in the document, especially by applying glue in discontinuous beads.

EXPANSION

Dimensional variations depend on the panel's orientation (length or width). It is imperative to consider these variations and never block the panel. For installation between two fixed walls, provide a space of around 3-5 mm on each side, which can be concealed by return claddings.

ISLAND / TABLE

Opting for installation on a supporting structure minimizes the risks of warping, ensuring the stability of the island or table.

SHELVES

SHELVES 39 mm 59 mm - MAXIMUM WEIGHT 15 KG / FIXING
MINIMUM SHELF DEPTH 200 MM MAXIMUM 350 MM

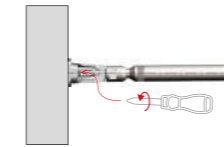

ADJUSTMENT OF SHELF SUPPORTS:

The fixing support provides the possibility of adjusting the shelf on three independent axes: vertical, lateral, and inclination.

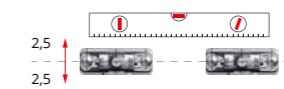

Vertical Adjustment

Adjust the shelf height by unscrewing the fixing screws, moving the fixing supports, then tighten the screws to secure the position.

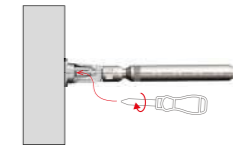

Loosening the fixing screws.

Align the supports vertically.

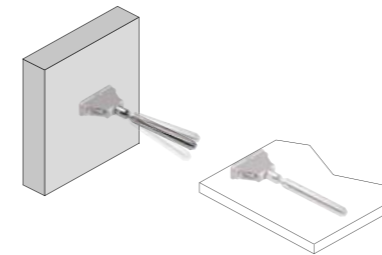

Tighten the fixing screws.

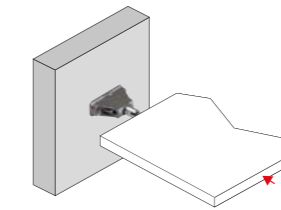

Lateral Adjustment

By partially inserting the shelf, the support rods can be moved laterally. Align the supports vertically by adjusting them before fixing the shelf in place.

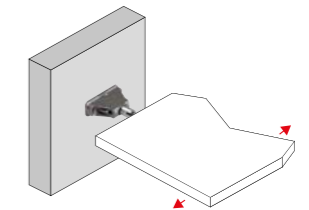

Tilt the shelf to match the support bar and partially insert it into the grooves.

Partially insert the shelf.

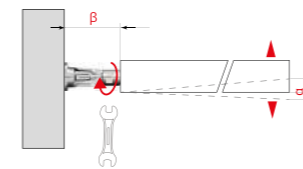

Adjust the shelf horizontally.

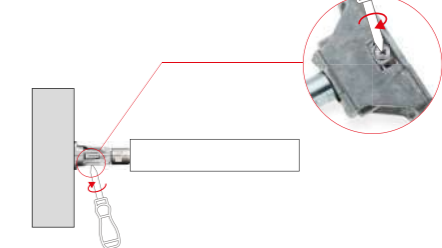

Tilt Adjustment

Once the shelf is partially inserted, adjust the angle by aligning the support bar with the grooves. Use a 10 mm flat wrench to turn the support bar clockwise and adjust the angle from front to back.

Rotate the support rod clockwise using a 10 mm flat wrench to adjust the shelf angle front to back.

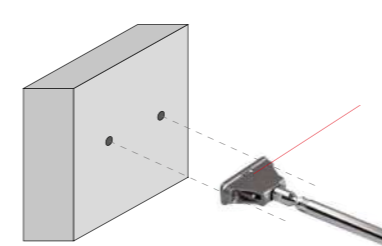

Tighten the locking screw to secure the rod.

WALL FIXING: The fixing bracket is provided already assembled and ready for installation. Simply attach it to the wall with 2 D5 screws and corresponding plugs. We recommend mounting the shelves on a suitable support (particleboard, bricks, concrete, wood, ...).

Mounting using only the fixing bracket:

The fixing must be installed with the label "TOP ALTO" facing upwards.

USE AND MAINTENANCE OF WORKTOPS

TOPSTAR worktops are designed to require minimal maintenance. They can be easily cleaned with a soapy sponge or a damp cloth. The laminate or compact used in these countertops are ideal materials to withstand common household activities such as water or food splashes. The laminates and compacts comply with EN438 standards, but it is essential to follow some recommendations to preserve the original appearance of the worktop.

RECOMMENDATIONS FOR USAGE

- Absolutely avoid cutting directly on the surface of the worktop. Always use a cutting board or chopping board.
- Never place hot dishes directly on the worktop. Use a trivet, such as stainless steel bars for Compact worktops.
- Do not leave hot appliances, such as a coffee maker, on for several hours directly on the worktop.

STAINS AND CLEANING

- Stains from red wine, tea, coffee, fruit juices, or certain chemicals should be promptly cleaned to avoid any surface alteration.
- Avoid letting water pool on the worktop, especially in sensitive areas and those in contact with backsplashes.

GLOSSY WORKTOPS

- Glossy worktops require special attention. Avoid sliding dishes or kitchen utensils to prevent scratches on the laminate.
- Textured finishes tolerate stress better than smooth, matte, or glossy finishes.

STORAGE OF WORKTOPS

- To maintain optimal flatness, it is strongly recommended not to lean the worktops and backsplashes against a wall. Horizontal storage is recommended, without direct contact with the floor.

GENERAL MAINTENANCE

- Daily maintenance is easily done with a soapy sponge or a soft cloth.
- Never use steel wool, abrasive sponges, metal brushes, or harsh abrasives.
- For stubborn stains, start by using a magic sponge. If that's not sufficient, use an organic solvent, rinse, and dry with a microfiber cloth.
- Take precautions when using organic solvents: ventilate the area, wear rubber gloves and protective eyewear, work away from heat sources.

PRODUCTS TO AVOID

- Liquid or powdered abrasive products.
- Wax-based products.
- Bleaching products (bleach).
- Chemical detergents containing strong bases or strong acids (limescale remover, hydrochloric acid, unlocking agents, silverware cleaner...).

GENERAL CONDITIONS OF SALE

I - GENERAL CLAUSES

Sales are subject to these general conditions that prevail over any other condition of purchase, unless a formal derogation is accepted by the seller. Consequently, no special conditions may prevail over the general conditions of sale, unless it is formally accepted by the seller in writing.

In the absence of express acceptance, any conflicting condition set forth by the buyer shall therefore be unenforceable against the seller, regardless of when it may have been brought to its attention.

II - ORDER ACCEPTANCE

Orders are deemed to be final only when they have been confirmed in writing and expressly accepted by the seller.

III - ORDER MODIFICATION

Any order modification or termination requested by the buyer can only be taken into consideration if it is received in writing and within a maximum of 48 hours after receipt of the Acknowledgement of Order.

If the seller does not accept such modification or termination, the advance payments at the order will not be returned.

IV - DELIVERIES

Delivery times are only given as an indication. Possible delays do not entitle the buyer to request the order termination, to refuse the product or to claim damages.

The products are deliverable carriage paid to the place agreed as per document A1 «Account Opening»

V - RETENTION OF TITLE

The seller retains ownership of the goods sold until actual payment of the full principal price and ancillaries.

The risk in the goods custody shall pass to the buyer on the day of its availability. In the event of partial or total non-payment, the seller may request either the return of the goods at the buyer's expense, or the immediate payment of all sums due.

VI - WARRANTY

The products being sold are for strictly domestic use and are intended to equip individual houses or multi-residential buildings. They must be installed in closed rooms with sufficient ventilation and heating to prevent deformation and to ensure humidity and hygrometry satisfactory levels. Such installation must be carried out according to generally-accepted practices.

The warranty does not apply if the products are installed or used for a purpose other than the one for which they are intended.

It is also void if the products are modified or subject to repair or maintenance by persons not being authorised by the seller. Finally, it is not applicable in the event of a defect in the design of the assembly into which the products are fitted or of erroneous measurements by the purchasing installer. This warranty, which excludes any liability other than the one relating to the products, is limited to the replacement of defective products or parts (or even the supply of products or parts for the same use if it is impossible to replace them with identical products or parts) or the reimbursement of their sale price, excluding the compensation of any other damage and the coverage of labour costs.

The installer may only benefit from the warranty if he/she notifies the seller by registered letter with acknowledgement of receipt within three months of delivery. Except with the agreement of the seller, no product or goods will be taken back.

The warranty for apparent defects in the products or for defects in conformity with the order or the dispatch note shall only apply if a complaint is made in writing by the seller within eight days of delivery of the products, without prejudice to the measures the buyer needs to take with regard to the carrier.

It will be up to the purchasing installer to prove evidence of the defects or anomalies observed and he/she will have to let the seller or their representatives establish their actual presence and possibly remedy them.

The installer will refrain from taking actions himself/herself or having a third party take actions to this end. The seller shall not be bound by

any obligation beyond the eight-day period.

The buyer may only return the products after prior written agreement from the seller. The buyer shall keep them at their premises without being able to claim any compensation and until receipt of said agreement.

Under no circumstances can the buyer return the products to the seller with carriage forward, the transport costs and all other return costs being the exclusive responsibility of the buyer, whatever the reason for the return.

VII - DAMAGED OR MISSING PRODUCTS

Our goods are sent at the recipient's risk, even if free on board.

The buyer must express their reservations precisely on the delivery note, in agreement with the carrier.

The buyer must confirm any claim by registered letter with acknowledgement of receipt addressed to the carrier within three working days following delivery and send a copy of such claim to the seller.

After the date of dispatch of the registered letter the damaged products must be kept at the disposal of the carrier, the expert and relevant insurance company.

Whatever the reason for the dispute, the products must under no circumstances be returned to the seller without the latter's prior agreement.

VIII - CONDITIONS OF SALE

Obtaining negative information about the buyer (drafts that remain unpaid, payment incidents, protests, etc.) authorises the seller to refuse any order or to request an advance of funds or to apply the buyer different payment terms from those applied to other customers.

IX - INVOICING

The prices invoiced are those of the price list in force at the time of delivery, it being understood that these prices will take into account any changes in prices as well as any turnover taxes that may be applicable at the time of delivery.

X - PAYMENT

Invoices are payable within 20 days of invoicing or in cash, unless otherwise agreed.

XI - LATE OR NON-PAYMENT

Any delay in payment shall automatically and without formal notice result in the payment of interest on arrears equal to at least 3 times the legal interest rate.

For payment in instalments, failure to pay one of them on the due date will result in the entire debt becoming immediately payable, without formal notice.

XII - JURISDICTION AND APPLICABLE LAW

For any dispute that may arise between the parties regarding the establishment, execution and interpretation of the sales contract, the Court of Pesaro (PU) Italy, shall have sole jurisdiction, which will decide in accordance with Italian law.
